

## Perspective Reversal and Theory of Mind

Theory of Mind  
The theory of mind is the ability to understand other people's thoughts and feelings. It is a key aspect of social interaction and communication.

How Human Languages Encode Perspective  
Languages can encode perspective in different ways. Some languages, like English, use words like "I" and "you" to indicate the speaker's and listener's perspectives. Other languages, like German, use case endings to indicate the speaker's and listener's perspectives.

Experimental Setup

A man in a suit and tie is holding a long white cane, pointing it towards a small yellow and white robot dog on the floor. He is looking down at the robot. In the background, there is a display board titled "Perspective Reversal and Theory of Mind" with text and diagrams. Several other people are standing around, watching the interaction.
